Otoendoscopically guided surgery J.-M. Thomassin

The endoscope with magnifying lens systems and retrotympanic sub-regions. During microsurgical procedures, the recognition of pathologic changes in developed from a basically diagnostic tool into a surgical instrument. Earlier, it served to see what exists. facilitated. The disadvantages of the operating microscope -reduced brightness and bad focus with higher magnification- can be compensated by additional endoscopy with the instrument's tip field of otoendoscopic control of microsurgery of the close to the target and with the view "around the corner". what, during recent years, was already looked at by a "happy few" of otological pilots. But, he spots by a rigid magnifying endoscope with an angled view- can be compensated by additional endoscopy with the instrument's tip field of otoendoscopic control of microsurgery of the close to the target and with the view "around the corner". While thus visualizing remote areas or hidden structures, he has also added new insights into this matter. One may view direction apparently no patho-anatomical secret say that he has provided a solid basis for both the remains undiscovered. What can be inspected can be scholars and the experts who want to enrich their arsenal, there are adequate instruments. This fact arsenal of otosurgical techniques. makes the analysis of surgical failures more plausible.
