**Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) Christopher Norman**

At first sight, finitely generated abelian groups and canonical forms of matrices appear to have little in common. However, reduction to Smith normal form, named after its originator H.J.S. Smith in 1861, is a matrix version of the Euclidean algorithm and is exactly what the theory requires in both cases. Starting with matrices over the integers, Part 1 of this book provides a measured introduction to such groups: two finitely generated abelian groups are isomorphic if and only if their invariant factor sequences are identical. The analogous theory of matrix similarity over a field is then developed in Part 2 starting with matrices having polynomial entries: two matrices over a field are similar if and only if their rational canonical forms are equal. Under certain conditions each matrix is similar to a diagonal or nearly diagonal matrix, namely its Jordan form.

The reader is assumed to be familiar with the elementary properties of rings and fields. Also a knowledge of abstract linear algebra including vector spaces, linear mappings, matrices, bases and dimension is essential, although much of the theory is covered in the text but from a more general standpoint: the role of vector spaces is widened to modules over commutative rings.

Based on a lecture course taught by the author for nearly thirty years, the book emphasises algorithmic techniques and features numerous worked examples and exercises with solutions. The early chapters form an ideal second course in algebra for second and third year undergraduates. The later chapters, which cover closely related topics, e.g. field extensions, endomorphism rings, automorphism groups, and variants of the canonical forms, will appeal to more advanced students. The book is a bridge between linear and abstract algebra.

### **From reader reviews:**

#### **Mary Gines:**

Book is to be different for every single grade. Book for children right up until adult are different content. As it is known to us that book is very important normally. The book Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) was making you to know about other know-how and of course you can take more information. It is rather advantages for you. The reserve Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) is not only giving you a lot more new information but also for being your friend when you really feel bored. You can spend your spend time to read your publication. Try to make relationship with all the book Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series). You never really feel lose out for everything when you read some books.

#### **Randall Briggs:**

The book untitled Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) contain a lot of information on the item. The writer explains the woman idea with easy technique. The language is very easy to understand all the people, so do not really worry, you can easy to read it. The book was authored by famous author. The author will bring you in the new age of literary works. You can easily read this book because you can read on your smart phone, or gadget, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can open up their official web-site as well as order it. Have a nice study.

#### **John Barrow:**

In this period of time globalization it is important to someone to get information. The information will make anyone to understand the condition of the world. The health of the world makes the information quicker to share. You can find a lot of recommendations to get information example: internet, magazine, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. The particular book that recommended to you is Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) this reserve consist a lot of the information of the condition of this world now. This kind of book was represented so why is the world has grown up. The terminology styles that writer require to explain it is easy to understand. The particular writer made some analysis when he makes this book. That is why this book suited all of you.

#### **Carol Ramirez:**

You can obtain this Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) by check out the bookstore or Mall. Only viewing or reviewing it could to be your solve issue if you get difficulties on your knowledge. Kinds of this book are various. Not only by

simply written or printed but also can you enjoy this book simply by e-book. In the modern era like now, you just looking because of your mobile phone and searching what their problem. Right now, choose your current ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still change. Let's try to choose proper ways for you.
