## Forest BioEnergy Production: Management, Carbon sequestration and Adaptation

For thousands of years, forest biomass or wood has been among the main energy sources of humans around the world. Since the industrial revolution, fossil fuels have replaced wood and become the dominant source of energy. The use of fossil fuels has the disadvantage of increasing atmospheric concentrations of greenhouse gases (GHGs), especially carbon dioxide (CO<sub>2</sub>), with the consequent warming of global climate and changes in precipitation. In this context, the substitution of fossil fuels with renewable energy sources like forest biomass is among the ways to mitigate climate change.

This book summarizes recent experiences on how to manage forest land to produce woody biomass for energy use and what are the potentials to mitigate climate change by substituting fossil fuels in energy production. In this context, the book addresses how management can affect the supply of energy biomass using short-rotation forestry and the conventional forestry applying long rotations. Furthermore, the book outlines the close interaction between the ecological systems and industrial systems, which controls the carbon cycle between the atmosphere and biosphere. In this context, sustainable forest management is a key to understand and control indirect carbon emissions due to the utilization of forest biomass (e.g. from management, harvesting and logistics, and ecosystem processes), which are often omitted in assessing the carbon neutrality of energy systems based on forest biomass. The focus in this book is on forests and forestry in the boreal and temperate zones, particularly in Northern Europe, where the woody biomass is widely used in the energy industry for producing energy.

### **From reader reviews:**

#### **Arthur Dickison:**

Why don't make it to become your habit? Right now, try to ready your time to do the important behave, like looking for your favorite guide and reading a publication. Beside you can solve your trouble; you can add your knowledge by the publication entitled Forest BioEnergy Production: Management, Carbon sequestration and Adaptation. Try to make book Forest BioEnergy Production: Management, Carbon sequestration and Adaptation as your buddy. It means that it can being your friend when you feel alone and beside associated with course make you smarter than ever. Yeah, it is very fortunated to suit your needs. The book makes you more confidence because you can know almost everything by the book. So , let us make new experience along with knowledge with this book.

#### **Jodie Long:**

Book will be written, printed, or descriptive for everything. You can know everything you want by a book. Book has a different type. To be sure that book is important issue to bring us around the world. Beside that you can your reading talent was fluently. A reserve Forest BioEnergy Production: Management, Carbon sequestration and Adaptation will make you to become smarter. You can feel much more confidence if you can know about almost everything. But some of you think this open or reading a new book make you bored. It is not make you fun. Why they might be thought like that? Have you in search of best book or suited book with you?

#### **Antoine Harris:**

People live in this new morning of lifestyle always make an effort to and must have the extra time or they will get large amount of stress from both everyday life and work. So , if we ask do people have time, we will say absolutely of course. People is human not a robot. Then we ask again, what kind of activity are you experiencing when the spare time coming to you of course your answer can unlimited right. Then do you ever try this one, reading books. It can be your alternative with spending your spare time, the book you have read is Forest BioEnergy Production: Management, Carbon sequestration and Adaptation.

#### **Kathleen Knight:**

Do you like reading a guide? Confuse to looking for your chosen book? Or your book was rare? Why so many query for the book? But just about any people feel that they enjoy to get reading. Some people likes reading, not only science book and also novel and Forest BioEnergy Production: Management, Carbon sequestration and Adaptation as well as others sources were given understanding for you. After you know how the great a book, you feel would like to read more and more. Science reserve was created for teacher as well as students especially. Those publications are helping them to increase their knowledge. In various other case, beside science guide, any other book likes Forest BioEnergy Production: Management, Carbon sequestration and Adaptation to make your spare time more colorful. Many types of book like this.
